Research Interests

My PhD research interests focus on the intersection of deep learning and Bayesian statistic — enriching one with each other: (1) **Bayesian Deep Learning**: Scalable Bayesian learning methods for the weight uncertainty of deep neural networks, e.g., SG-MCMCs (2) **Deep Bayesian Learning**: Deep neural networks as flexible representation methods in Bayesian models, e.g., GANs and VAEs. These tools have been applied to various domains, including computer vision, natural language processing and deep reinforcement learning etc.
